- ²⁴³ Tunander (2009), Chapter 5; see also the tape 1c from 12 October 1982 on our web page. The tape recordings from the Swedish submarine incident on 11-14 October 1982 were made on five tapes ('0', '1', '2', '3' and '4'). The recordings were made on the island of Mälsten at the exit from the Muskö naval base. They used five hydrophones with a distance of 100-150 meters between each of them. We have here only presented the recordings from hydrophone no. 3 (sound channel 3 on the tape), because of the amount of information that has to be downloaded. Tape 1c is about 35 minutes long. It starts with an almost ten minute long recording of a twittering sound that, according to the documents, is supposed to start at 16:30. After that a comment follows on the speaker channel saying that 'it is 17:50 ...probable submarine'. After that, follows a 26 minute long recording with a lot of noise, thuds, metallic sounds and sounds from rudders and hydraulic valves. At 18:00, the sonar operator says to the staff at Mälsten that he is recording a 'submarine' or 'certain submarine'. Analysis made by specialists after 2007 also shows that this is a 'certain submarine' recorded very close to the hydrophones. At 18:07 (after 26 minutes and 33 seconds on 'Tape 1c') one can hear a hydraulic valve closing, a distinct double metallic sound, "Keke", that makes it possible to define the exact position of the valve and the submarine to be in between hydrophone no. 1 and 2, about 80 meters from hydrophone no. 2 (the sound appears first in no. 2, then 6 milliseconds later in no. 1, 67 milliseconds later in no. 3, and 150 milliseconds later in no. 4). When you know the position of the hydrophones you can also calculate the position of the source of the sound. However, we have not identified any propeller sounds. The submarine is most likely gliding slowly, going very slowly with the propellers, close to the hydrophones. There is a lot of noise from the submarine, particularly from 18:00 to 18:16. After that the sonar operator changes the tape. The speaker channel on tape 2 starts with: 'continued recording of submarine. Four minutes for changing the tape'. To listen to the tape, one has to download the program Audacity 1.3, open this program and then open each file through this program <http://audacity.sourceforge.net/download/>.
