

Left: lighthouse and bunker (for the Måsknuden mine forces command at Målsten). The mine detonation on 11 October 1982 (photo: 12 October 1982 taken from *Amalia*)²²⁰ took place 100 meters left of the island. Right, the document from the helicopter Y46 showing the expansion of the green patch (the green "sea-marker dye") 13:45-15:00, while moving 1 km northwards. At 13:45, it was 10 meter from the island.²²¹

EVENT SUBSUNK

If any of the following conditions are met, **EVENT SUBSUNK** must be started:

1. A submarine fails to surface promptly, following a known accident.
2. There is reason to suspect that a submarine has suffered a casualty and requires assistance. Indications of a submarine disaster that call for the immediate execution of **EVENT SUBSUNK** include:
 - a. Sighting a submarine messenger buoy.
 - b. Sighting green dye marker.
 - c. Sighting a distress pyrotechnic (red) fired from a submarine.

Left: the expansion of the green dye from 13:45 to 15:00. It would have appeared on the surface around 13:30 at a position where *Belos* found possible steel plates 1-1.5 meters with its sonar. Right: U.S Navy instructions for "Event Subsunk" ("Sighting green dye marker", US Navy Operations Specialist, note 67).

ADI/Thales advertisement for Submarine launched markers (US & UK visual distress signals or VDS).²²²
